

Our objectives

- Develop and validate a framework for transparent performance evaluation, including the definition of key performance indicators (KPIs); guidelines for data collection; and a performance measurement system prototype
- Draft recommendations for the implementation of the performance measurement system in the cities' decision making processes
- Provide recommendations for the development of new business models
- Test all project results in the participating cities
- Engage stakeholders in identifying and exploiting opportunities for synergies and replicability, and establish a collaboration platform for European cities

Results

Performance measurement framework

Data sets & data collection

Policy making recommendations

Business models & opportunities

Smart city index recommendations

CITYkeys

- supports the transition to low-carbon, resource-efficient cities
- helps cities respond to the needs of their citizens
- offers tools to foster the efficient use of municipal budgets
- enables stakeholders to learn from each other
- creates trust in smart city solutions
- provides a framework for monitoring long-term outcomes

How to get involved

The CITYkeys project's testing phase began in 2016. Participants will:

- test our key performance indicators and data collection procedures in their city using CITYkeys tools and methods
- share evidence and feedback about the practical use, benefits and challenges of these tools and methods
- help us develop a transparent system for monitoring and comparing smart city solutions and projects across Europe

Join us through:

- Project workshops
- Open surveys
- Pilot testing
- Networking events
- Online forum
